

LECTIO INAUGURALIS ALGEBRIS CHAIR IN LONG-TERM INVESTMENT AND ABSOLUTE RETURN

UNLOCKING VALUE TO HAVE AN IMPACT ON GROWTH

Long-term investment and absolute return (LTI) is a wide and comprehensive concept, with two different levels of implications. On one hand, the strategies of funds managers willing to create long-term value and, on the other, financial assets that are fast growing, and long-term and absolute return per se. LTI is generating a quantum leap and a seismic shift we need to tackle. A new eco-system is born where investors have a crucial role to unlock potential and profit. In this scenario, investors and investees could cooperate to make profit and value happening with a stronger societal impact at large. It means more GDP and more employment deployed for a better society. It is certainly the revolutionary and regenerative power of finance. The Algebris Chair aims to be ambitious and impactful, by prompting a unique training camp for Bocconi students with the involvement of top fund managers worldwide. Its purpose is to unlock the potential of young talents and create a future generation of fund managers, able to master long-term investment and absolute return permanently affecting growth.
