

Webinar

Sustainable energy investment in Member State recovery plans

30 June 2020: 10.30 to 12 CET

Background: The European Green Deal is considered an essential element of an inclusive and sustainable growth strategy for Europe. EU Member States are currently developing recovery plans as part of their existing strategies to the COVID-19 pandemic. Sustainable energy investments are an important pillar of such strategy, which requires significant public financing as a lever for private investments.

This webinar will continue the discussion on new forms of sustainable energy investment support as part of the recovery plans designed by Member States and supported by national financial institutions. The webinar will be conducted in English and will be moderated by Lieven Vanstraelen from Energinvest.

This event is organised as part of the Sustainable Energy Investment Forums contract, funded under the EU Horizon 2020 programme and managed by the Executive Agency for Small and Medium-sized Enterprises (EASME).
